

Product Case Study – Swiggy PYNG

1. Title

Driving Activation for Swiggy's PYNG App

2. Background

Swiggy Pyng is a newly launched AI-powered platform by Swiggy that connects users with verified professionals across 100+ categories including health, wellness, finance, astrology, travel, and events.

3. Problem Statement

Despite high signup rates, very few users complete onboarding milestones such as viewing services, adding payment methods, or making bookings within the first 48 hours.

4. Goals & Metrics

Stage	Users	Drop-off %
Signup	100,000	–
Home Screen Browsing	65,000	35%
Clicked a Service	40,000	38.5%
Viewed Service Details	30,000	25%
Added Payment Method	12,000	60%
Completed Booking	8,000	33%

- Improve activation rate by 40% in next 30 days
- Reduce funnel drop-offs
- Improve CTR, bounce rate, and onboarding engagement

5. Funnel Analysis (Dummy Data)

6. Root Cause Analysis

1- No contextual onboarding: New users often feel lost after signing up, lacking clear direction on how to explore the app or utilize its features. This results in confusion, frustration, and early drop-offs. Additionally, the app lacks engaging short videos introducing coaches across domains such as health, wellness, finance, astrology, travel, and events—further limiting user engagement and discovery.

2- Services not available in user's area: Many users encounter services that are irrelevant or unavailable in their location, which leads to confusion and a poor user experience. This mismatch often results in users disengaging from the app prematurely.

3- No first-time offer or urgency trigger: In the absence of clear incentives, new users often hesitate to make their first booking—especially when they're passively exploring the app. This lack of motivation can lead to delayed transactions or total disengagement.

4-User Confusion: First-time users may not understand how to proceed with services.

5-Too Many Choices: Overwhelming options may discourage users from making a decision.

6: Engagement Triggers: Lack of notifications or prompts reduces user re-engagement.

7: Marketing Strategy: Insufficient marketing to highlight the app's key features.

7. Proposed Solutions

- **a. Interactive Onboarding Checklist-** Introduce a step-by-step onboarding flow with a visible progress tracker to guide new users in exploring app features smoothly. Showcase short videos of coaches sharing their experiences across domains like health, wellness, finance, astrology, travel, and events. If a user views and likes a coach's video, they are prompted to book a consultation (video/call/chat), improving trust, time-on-app, and conversion.

Guided Feature Walkthrough: Walk users through key app features one step at a time, enhancing familiarity and reducing early drop-offs. Embedded coach videos further personalize the journey and motivate action.

Progress Progression Tracker- Display onboarding progress with visible completion percentages, encouraging users to finish onboarding and unlock more features.

Impact vs Effort:

- **Impact:** High – Improves early user engagement and funnel conversion
- **Effort:** Medium – Requires UX changes, tracking, and logic for checklist progression

Success Metrics

- Checklist Completion Rate
- Activation Rate within 48 hours
- Time-to-first-action

- **Geo-Smart Service Display – Hyper-Personalized Service Discovery:**

Geo-Smart Service Display is a location-intelligent system that tailors the user experience by dynamically showcasing services, offers, and expert recommendations

based on the user's real-time geographic location. Integrated directly into the Swiggy Pyng app, this feature ensures that users only see relevant, bookable services available in their specific area—enhancing trust, reducing friction, and boosting engagement.

Key Features & Functionalities:

1: Localized Service Insights

Real-time service filtering ensures users only see experts and offerings available in their pin code. This eliminates frustration from unavailable services and reduces drop-off.

2: Personalized Recommendations + Smart Sorting:

Uses location, time-of-day, and previous behaviours to intelligently sort listings. Example: *"Top-rated wellness sessions available this evening near you."*

3: Dynamic Service Updates

As service availability changes or users move, the display updates in real time—keeping content accurate and useful.

4: Live Availability & Instant Booking Tags

Highlight experts who are online or available "within the next hour" to prompt immediate bookings.

5 Micro-location Push Notifications:

If a user enters a new area (e.g., Koramangala), notify them: *"New services available near you. Tap to explore."*

6: Feedback-Driven Personalization

After each session, quick feedback (e.g., "Was this expert helpful?") refines future recommendations, improving relevance over time.

Effort vs Impact Analysis

Impact: 🌟 **High** – Hyper-relevant discovery drives higher engagement, trust, and booking conversions.

Effort: 🌀 **High** – Requires integration of GPS, service availability mapping, and real-time content delivery infrastructure.

Success Metrics to Track:

Reduction in Homepage Bounce Rate
Increase in Service Click-Through Rate (CTR)
Higher Engagement Time per Session

3. Limited-Time First Booking Offer:

Introduce limited-time offers for first time bookings to create urgency and motivate new users to complete their transactions within a specific timeframe.

Targeted Marketing Campaign- Provide a compelling discount for new customers

Attractive Discount Offer- Promote offer through personalized marketing efforts

Urgency through Time Limit- Create urgency by limiting the discount duration

Impact vs Effort:

- **Impact:** Medium – Boosts conversion but may have diminishing returns
- **Effort:** Low – Simple to implement via a marketing campaign or coupon logic

Success Metrics

- Redemption Rate
- First Booking Conversion %
- Average Time-to-First Booking

8. Prioritization- RICE Framework: To prioritize the proposed solutions, I used the RICE Framework, which helps balance user impact, confidence in outcomes, and development effort.

Factor	Definition
Reach	How many users will this impact in the short term?
Impact	How much will this move the activation metric?
Confidence	How confident are we in the predicted impact?
Effort	Engineering, design, and operational resources required

RICE Score Prioritization

Initiative	Reach	Impact	Confidence	Score
First-Booking Offer	High	Medium	High	480
Onboarding Checklist	High	High	High	324
Geo-Smart Display	Medium	High	Medium	180

- **10: Expected Outcomes and Conclusion**

a: Enhanced User Engagement: Implementing solutions will significantly increase user interaction on the platform.

Goal: Increase interactions (clicks, time spent, sessions/user)

Before: Avg. session duration = 1.8 min | Pages per session = 2.1

After: Avg. session duration = 3.2 min | Pages per session = 4.5

Impact: +78% session duration → deeper engagement

b: Higher Activation Rates: Focused onboarding will boost new user activation within the first 48 hours.

Goal: Increase the % of users who complete key actions within 48 hours

Before: Activation rate = 24%

After: Activation rate = 41%

Impact: +17% uplift in early engagement due to better onboarding

c: Reduced Drop-off Rates: Streamlining the booking process will lower the drop-offs a crucial funnel stages:

Goal: Improve funnel completion by streamlining booking

Before: 64% drop-off between "add to cart" and "checkout"

After: 38% drop-off

Impact: +26% more users completing bookings

d: Geographic Service Relevance: Displaying geo-specific services will maintain user interest and satisfaction:

Goal: Increase click-through and booking rate via local targeting

Before: CTR = 9% | Conversion rate = 4.2%

After: CTR = 14.5% | Conversion rate = 6.8%

Impact: +5.5% CTR | +2.6% conversion via geo-specific listings

e: Incentivized First Transactions: Limited-time offers will encourage quicker first bookings and enhance user retention.

Goal: Boost first-time booking with offers

Before: 1st booking rate = 18%

After: 1st booking rate = 36%

Impact: +100% increase in initial transaction rate with time-sensitive discounts

f: Data-Driven Improvements : Leveraging user flow data will support strategic decisions for ongoing improvements.

- **Goal:**

Leverage user flow and funnel data to continuously optimize the user experience (UX) and guide strategic product decisions.

Approach:

By analysing user behaviours across key interaction points, teams can identify friction areas and implement targeted improvements.

Example Insight:

User flow data revealed that **60% of users were dropping off at the address input page** during the booking process.

Action Taken:

The address input form was simplified and redesigned for clarity and ease of use.

Resulting Impact:

The drop-off rate on that page was reduced from **60% to 25%**, leading to a **significant uplift in overall conversion rates** and a smoother user journey

g: Visual Data: Impact Over 30 Days

Let's visualize how these strategies improve key KPIs over a 30-day timeline:

□ **Activation Rate:** The percentage of new users who complete a key action (e.g., first booking) within a specific time, typically 48 hours.

□ **First Booking Completion:** The percentage of users who complete their first transaction after signing up.

▣ **Session Duration:** The average amount of time a user spends actively engaging with the app during a session.

KPI (%) | Day 0 | Day 7 | Day 14 | Day 21 | Day 30

Activation | 24% | 31% | 36% | 39% | 41%

Booking Rate | 18% | 24% | 29% | 33% | 36%

Engagement | 1.8m | 2.3m | 2.7m | 3.0m | 3.2m

10. Sample User Journeys

▣ User A: Signs up → Sees irrelevant services → Drops off

▣ User B: Signs up → Guided to Service→ Uses coupon → Books service

11. Next Steps:

- **Prioritize onboarding + offers**- Prioritize onboarding and offers to ensure new users quickly understand the app's value and are incentivized to take their first key actions.
- **Launch A/B tests**: Launch A/B tests to compare variations and identify what drives better user engagement and conversion.
- **Track activation KPIs over 30 days**: Track activation KPIs over 30 days to measure user engagement, retention, and the effectiveness of onboarding strategies.
